

Easikey Manager for Windows

Who needs Easikey Manager?

If you are responsible for PAC Easikeys installed in multiple occupancy residential blocks and would like a low cost solution to administer key fobs centrally from a location like an area housing office, then Easikey Manager is for you.

Enhanced security

Easikey Manager will give a degree of control only previously dreamt about by housing managers. The ability to add and delete keys instantly from a remote location will improve security in multiple occupancy housing stock and give further peace of mind to tenants.

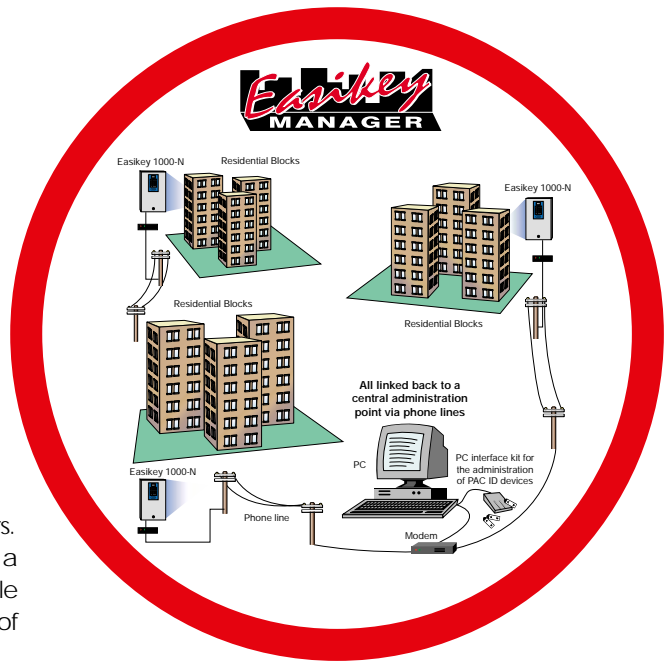

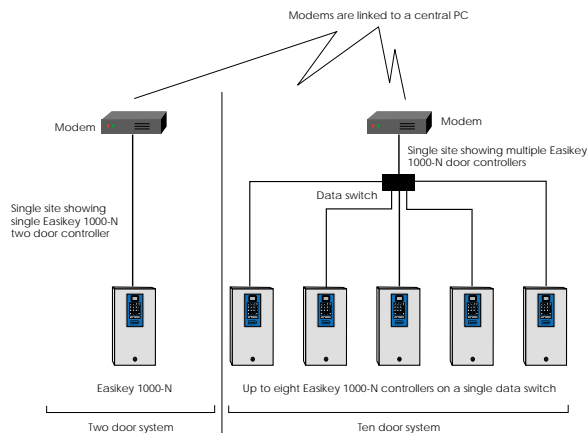

Other features of the software include a powerful reporting package which offers automatic reports such as unused token reports. This is a valuable report as it could show that a resident may be incapacitated in some way or that the occupant of a flat has left never to return.

How does it work?

A new version of PAC's Easikey 1000 controller called the Easikey 1000-N (N for Network) is required for each two doors that are to be controlled.

Each controller is linked by a modem to either the GSM or hard-wired telephone networks. A dedicated PC and modem running Easikey Manager is installed at a central location. The software has a copy of each database in every Easikey 1000-N installed.

Changes can be made to the copy of the database at the PC. Once that has been done the database is sent to the Easikey 1000-N either by force dialling the controller or on scheduled dial up.

System Specification

Easikey Manager Software:

Easikey manager software is available on CD with full documentation and includes an office administration reader.

PC:

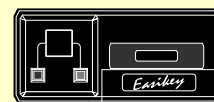

PC running Windows® 95/98/NT with monitor, internal modem, keyboard and CD drive.

Connectivity:

One PSTN standard telephone line or one GSM modem is required for every controller installed.

Easikey 1000-N Controller:

Each Easikey 1000-N controller can control up to two doors.

Upgrade Path

You can replace your old Easikey 99 controllers or update Easikey 1000s with

Easikey 1000-Ns. Easikey 99, Easikey 1000 and Easikey 1000-N controllers use the same readers, IDs and cabling.

With the addition of Easikey Manager software, PC and modems you can have a low cost upgrade path to a central administration system specifically designed for housing applications.
